

Sweet Spot

Dynamic Honeypot through port switching for Cybersecurity

■ Official Installation & Downloading Guide

Disclaimer: This document is an official installation and download guide for the Sweet Spot project. Unauthorized distribution, modification, or commercial use of this document without permission is strictly prohibited.

1. System Requirements

- Operating System: Windows 10/11 (tested), Linux (future support)
- Privileges: Run as Administrator (to bind to ports)
- Python Version: 3.9+ (only required for source code; not needed with installer)
- RAM: 2 GB minimum
- Tools (optional for testing): Nmap, Netcat

2. Installation Guide

Method 1: Using Precompiled EXE (Recommended)

1. Download Sweet Spot Setup.exe from the official release package.
2. Run the installer and follow the on-screen instructions.
3. After installation, launch the app from Start Menu or Desktop shortcut.

3. Downloading

- Official Download: Provided by project maintainers only.
- Ensure you download Sweet Spot Setup.exe from trusted sources.
- Do not use third-party modified files to avoid security risks.
